Contents of this file

1. Introduction and caption for large Table S1

Additional Supporting Information (Files uploaded separately)

1. Large Table S1

Introduction

Supporting information includes GICs measurements used to validate the model applied for GIC calculations shown in Figure 4.

Caption for large Table S1. The table shows direct GICs measurements in a transformer neutral conductor of a 500 *kV* power grid substation operated in the central region of Brazil. The data were acquired by a Hall-effect transducer with sampling rate of 10 *s*. One-minute GICs are shown during the 24 hours of October 8, 2013.
